

Eiffel

by SHIGEKI FUJISHIRO

Eiffel stool has been designed in a minimal manner so the structure itself becomes form. It's made out of aluminium so it's a stool that can be use both indoors and outdoors. It's stackable so it can be put away to one side of the room, taking up very little space. Three legs instead of four. It's just a matter of ergonomics and comfort. The three legs offer the same stability as a four-legged stool and greater freedom of movement when you're sitting, because legroom is not limited by a chair-leg on each side, as happens with chairs of four.

The stool is available in two finishes: anodised, or painted in red, white, yellow, blue, or black, and a small version for kids.

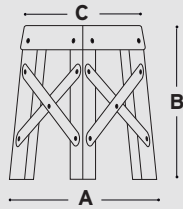

“The Eiffel stool is like that good friend who’s always there for you, come rain, come shine.”
